Project Sonnenfeld – Biogas Plant for Sale

Sonnenfeld Bioenergie GmbH (fictional) operates an agricultural biogas plant in Brandenburg, Germany. The shareholders intend to sell 100% of the shares in a structured sell-side process.

Key facts

Item	Value
Location	Near Luckau, Brandenburg (fictional site)
Commissioning year	2012
Installed electrical capacity	1.2 MW (two CHP units of 600 kW each)
Installed thermal capacity	1.3 MW
Annual electricity output (2025)	9,400 MWh
Feedstock	Maize silage 55%, cattle manure 30%, grass silage 15%
Heat use	District heating for 140 households and a grain dryer
Employees	4 full-time

Financial overview

Metric (EUR)	Value
Revenue 2025	2.6 million
EBITDA 2025	780,000
EBITDA margin	30%
Net debt (31 Dec 2025)	1.1 million

SYNTHETIC SAMPLE DOCUMENT – fictional company and figures, created for a software demo. Not a real offer.

Regulatory situation

The plant receives a fixed feed-in tariff under the German Renewable Energy Sources Act (EEG 2009) until 31 December 2032. After that date the plant must either take part in EEG tenders for follow-up support or switch to direct marketing. The management has prepared a flexibilisation concept with an additional 600 kW CHP unit and a gas storage of 2,000 m³ to qualify for the flexibility premium.

Investment highlights

1. Secured feed-in tariff until end of 2032.
2. Long-term feedstock contracts with three local farms, running until 2030.
3. Upside from flexibilisation and a possible conversion to biomethane feed-in; the gas grid is 3.5 km away.
4. CHP units fully overhauled in 2024 (investment EUR 350,000).

Key risks

Rising maize silage prices; follow-up support after 2032 is not yet secured; tightening rules on digestate storage.

Process and contact

Non-binding offers are expected by 31 March 2027. A virtual data room opens after signing an NDA. Contact: Project Sonnenfeld team, Example Advisory (fictional), sonnenfeld@example.com.
